

Thermal Media Improvement Information for Kodak Moments Photo Printers

Kodak Moments has a long-standing commitment to ensure optimal performance of your Kodak Moments photo printers.

New for 2026

Kodak Moments has a new generation of media with improved image quality to replace the existing media for the 6R and 5R printer range.

The media and software updates provide a host of benefits to retailers using Kodak Adaptive Picture Exchange (APEX system) or Kodak Picture Kiosks, and customers printing from a PC with a WINDOWS operating system. These updates will include new printer firmware for some models and new color profiles for all 6R/5R printers.

An update to the ICC color profiles will allow you to take advantage of the new, improved formulation. The new media will further enhance image performance for highlight details and color contours giving the prints a richer look and feel.

For optimal results it is advised that new color profiles and any new firmware should be installed prior to using the new media.

The new media will be available in the 2nd calendar quarter of 2026 (depending on regional stocks at the time)

New media can be identified with a “new for 2026” callout on the corner of the box label.

Printer and any software updates can be found under the relevant sections of the retailer download site.
